

HOUSING NUMBERING

I NUMBERING SYSTEM PROCEDURE

- Determine the identification number for the housing. The two housing halves and the four (4) dowel pins have the same identification number.
- Consult with person in charge of housings for correct number.
- Hand engrave the numbers with diamond point making digits about 0.100" tall.

II LOCATIONS OF MARKINGS

- *S half*—on back of housing, between large dowel hole and nearest jig hole. (Above the pin hole for the ground plane.)
- *R half*—on back of housing, between large dowel hole and nearest jig hole. Position is mirror image with respect to parting plane of the *S half* marking position. (Avoid the area close to the cable slot).
